Abstract

These boundaries comprise the 64 general electorates released by the Representation Commission in August 2025. These boundaries will be used for the 2026 General Election. The Representation Commission is convened after each Census to re-draw electorate boundaries to make sure each electorate has about the same number of people. Stats NZ calculates the general electoral population, number of general electorates, and North Island and South Island electoral quotas using the formula specified in the Electoral Act 1993. When setting the boundaries, the Representation Commission also considers existing boundaries, communities of interest, the infrastructure that links communities (such as main roads), topographical features, and any projected variation in the population of those electorates during their existence. Electorate names are provided with tohūtō/macrons (in UTF-8 format). To support users, additional name fields are also provided in ASCII

format.Meshblocks, which are aggregated to form electorates, are updated annually by Stats NZ. The 2025 electorate boundaries are the result of the review undertaken by the Representation Commission and will be used for the 2026 General Election. A small number of minor technical adjustments, not involving population, have also been made to electorate boundaries, i.e. to align to LINZ cadastral lines (property boundaries).

Purpose

These boundaries comprise the 64 general electorates released by the Representation Commission in August 2025. These boundaries will be used for the 2026 General Election.

Lineage

The digital meshblock boundaries are stored and maintained by Stats NZ. Non-alignment of meshblock and cadastral boundaries are one of a number of reasons for meshblock boundary adjustments. Other reasons include requests from local authorities, Local Government Commission, Electoral Representation Commission and to make census enumeration processes easier. From the high-definition meshblock pattern, higher geographies are dissolved using the dissolve tool in the Arc GIS suite to create multiple output datasets.
